## **Introduction to Preclinical Prosthodontics**

Preclinical Prosthodontics is taught as a practical adjunct to the course of Science of Dental Materials. It is aimed at introducing the Second Year student to the science of Prosthodontics at a basic preclinical level. Students will mostly work in a laboratory setting on learning different aspects of denture fabrication, and through deliberate practice they will get the opportunity to develop sound working skills in relevant tasks through various preclinical exercises, as mentioned in their logbooks. Although direct patient-care is not dealt with, however a small portion of clinical work will still be covered through student-to-student clinical interaction. It is hoped that these diverse working opportunities will help groom the various capabilities of students both in laboratory as well as clinical settings.

After successful completion of this course component, students will be able to work comfortably in the following two years of their undergraduate studies.

## **Main Learning Outcomes**

By the end of this course component, students of Second Year BDS will be able to:

1. Recognize different instruments used in denture fabrication
2. Perform wire bending into different shapes
3. Make wrought wires clasps on different teeth
4. Identify and manipulate different types of gypsum products for making casts and pouring impressions and ideal moulds
5. Identify and manipulate different impression materials
6. Fabricate record bases with different materials
7. Perform mounting of study cases/casts on plain line articulator
8. Perform tooth setup of different partially edentulous situations
9. Perform laboratory processing of partial denture case using different techniques and materials

## Teaching and Learning Strategies

The following teaching and learning strategies will be adopted to administer the course of Preclinical Prosthodontics in line with modern requirements of medical education:

1. **Laboratory Demonstrations:** Most of the content will be covered in a laboratory setting for which appropriate practical/laboratory demonstration sessions will be organized. Students will be facilitated by demonstrators with or without supervision of the senior faculty for completing the preclinical exercises. Any amount of lab work will also be facilitated by laboratory technicians for covering some of the technically challenging tasks.
2. **Clinical/Chairside Demonstrations:** These will be covered within the Department of Prosthodontics by concerned demonstrators with or without supervision of senior faculty. Clinical sessions will be limited to history and examination portion on patients and impressions portion on fellow students. Students will get a chance to handle the materials in a clinical setting and will also start developing communication skills for active patient care.
3. **DOPS (Direct Observation of Procedural Skills):** For assessing the competency of students in various clinical and laboratory steps involved in prosthesis fabrication. For this purpose, specific criteria have been developed as mentioned in student logbooks.

## Teaching Faculty

The following teaching faculty of Department of Prosthodontics shall be responsible for conducting various teaching sessions and assessing student performance in given exercises:

- In-charge                                      Prof. Dr. Salman Ahmad (HOD Prosthodontics)
- Team members                                Dr. Abeer Ijaz (Demonstrator)  
                                                            Dr. Aima Riaz (PGT)

## Course Content / Quota of Preclinical Exercises

In order to meet the main learning outcomes, different preclinical exercises have been devised and students will be required to complete the given quota of exercises in order to qualify for sitting in annual professional examination. The following exercises and quota shall be implemented as course content for Preclinical Prosthodontics:

| No. | Exercises                                             | Quota          |
|-----|-------------------------------------------------------|----------------|
| 1.  | History taking                                        | 3 patients     |
| 2.  | Clinical (extraoral and intraoral) examination        | 3 patients     |
| 3.  | Plaster slab formation                                | 3 slabs        |
| 4.  | Ideal mold pouring (upper and lower arch)             | 2 sets         |
| 5.  | Clasp making (on molars, premolars and canines)       | 10 clasps each |
| 6.  | Alginate model impressions (upper and lower arch)     | 2 sets         |
| 7.  | Cast fabrication                                      | 3 sets         |
| 8.  | Trimming of the cast                                  | 3 sets         |
| 9.  | Alginate student impressions (upper and lower arch)   | 1 set          |
| 10. | Partial denture for anterior missing teeth            | 2 cases        |
| 11. | Advanced wire bending (2 exercises)                   | 3 each         |
| 12. | Partial denture posterior missing teeth               | 2 cases        |
| 13. | Formation of baseplate #1                             | 2 plates       |
| 14. | Formation of baseplate #2                             | 2 plates       |
| 15. | Lab processing of dentures (1 upper and 1 lower case) | 2 cases        |
| 16. | Finishing and polishing of processed dentures         | 2 cases        |

## Specific Learning Outcomes for Preclinical Prosthodontics Course

| No. | Exercise                   | <b>Specific Learning Outcomes</b><br><i>At the end of each exercise, a Second Year BDS student should be able to:</i>                                                                                                                                                                                                                                                                                             | <b>Teaching Strategy</b><br><i>(Duration = 2 hrs each)</i> |
|-----|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
| 1.  | Introduction to the course | <ul style="list-style-type: none"> <li>Summarize the scope of Preclinical Prosthodontics</li> <li>Name the various instruments and equipment to be used</li> <li>Identify the instruments and equipment to be used</li> <li>Arrange for required armamentarium</li> </ul>                                                                                                                                         | 1 lab                                                      |
| 2.  | History taking             | <ul style="list-style-type: none"> <li>Obtain a detailed history from the given patients</li> <li>Record the findings on given history charts</li> <li>Present the case to teaching faculty</li> </ul>                                                                                                                                                                                                            | 2 clinics                                                  |
| 3.  | Clinical examination       | <ul style="list-style-type: none"> <li>Obtain consent before proceeding with examination</li> <li>Perform a detailed clinical (extraoral and intraoral) examination independently or under supervision</li> <li>Record the findings on given examination charts</li> <li>Name and identify most of the intra-oral structures</li> <li>Present the case to teaching faculty</li> </ul>                             | 2 clinics                                                  |
| 4.  | Plaster slab formation     | <ul style="list-style-type: none"> <li>Differentiate between hard and soft plaster</li> <li>Dispense appropriate amount of plaster for required work</li> <li>Manipulate the given plaster with correct volume of water</li> <li>Achieve a desired consistency of the mixture</li> <li>Fabricate a plaster slab of given dimensions</li> <li>Trim the slab upto required size</li> </ul>                          | 2 labs                                                     |
| 5.  | Ideal mold pouring         | <ul style="list-style-type: none"> <li>Dispense appropriate quantity of stone into mixing bowl</li> <li>Correctly mix the contents with a plaster spatula</li> <li>Achieve a uniformly creamy mixture</li> <li>Correctly pour the ideal moulds by tapping or over a vibrator</li> <li>Allows sufficient time for plaster to harden/set</li> <li>Recover the casts without any surface voids or bubbles</li> </ul> | 2 labs                                                     |

| No. | Exercise                                           | <b>Specific Learning Outcomes</b><br><i>At the end of each exercise, a Second Year BDS student should be able to:</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Teaching Strategy</b><br><i>(Duration = 2 hrs each)</i> |

## **Assessment Tools**

- MCQs (for theory/knowledge component related to practical work/exercises)
- OSPE (for all practical work)

## **Marks in Annual Exam**

- 10 MCQs of 1 mark each (total 10 marks)
- 4 OSPE stations of 3 marks each (total 12 marks)

## **Learning Resources**

1. Preclinical Manual of Prosthodontics by Lakshmi S.
2. Online YouTube resources (as instructed during demonstrations)
